

LUÍSA CUSTÓDIO

DEVELOPED TWO TECHNOLOGIES THAT WON AN HONORABLE MENTION AT THE TECH2MARKET AWARDS PROMOTED BY THE UNIVERSITY OF THE ALGARVE. CONGRATS!

Tell us more about your technologies.

They consist on the development of extracts of marine plants with anti-aging properties for incorporation in cosmetic products and the production of selected medicinal halophyte plants in an integrated system using aquaculture effluents.

What is the potential of this technology?

The production and marketing of innovative cosmetic products and the optimization of a sustainable herbal production system.

What opportunities does this award bring?

This award will enable the development and implementation of these technologies, from the establishment of national and international contacts to the establishment of a business plan.

Luísa Custódio is senior researcher at CCMAR since 2010. She works in marine biotechnology, more specifically in the biotechnological applications of marine plants.
