SEAQUEST PRESS RELEASE 03

SEAQUEST Educational Toolkit Now Complete: Educational Activities Guide for Teachers Released

[Brussels, 04.09.2026] — The SEAQUEST project is pleased to announce the completion of a major milestone: the release of the SEAQUEST Educational Activities Guide for Teachers. Combined with the previously released SEAQUEST Curriculum for Teachers, the comprehensive Educational Toolkit is now available to support primary school educators in effectively introducing seagrass literacy in their classrooms.

One of the key objectives of the SEAQUEST project has been to develop this two-part Educational Toolkit. The SEAQUEST Curriculum for Teachers was released in March 2026, providing educators with essential knowledge about seagrass ecosystems and their value to the environment and people. The English version of the SEAQUEST Educational Activities Guide for Teachers is now available on the SEAQUEST website, completing this essential resource for educators.

A Comprehensive Resource for Teachers

The Educational Activities Guide consists of two essential parts designed to help teachers effectively introduce seagrass literacy in primary schools.

The first part provides the Pedagogical Framework and Teacher Guidance, including aims and objectives, pedagogical approaches, competencies, assessment strategies and tools, detailed guidance on using the lesson plans, and further reading resources.

The second part features Lesson Plans, organized in seven Thematic Modules. The Modules are based on the fifth Essential Principle of Ocean Literacy and the 6 Principles about Seagrasses: seagrasses are unique plants; they form extensive underwater meadows; they

support great diversity of life; they stabilize seabeds, improve water quality, and store carbon; they are inextricably interconnected with humans; and they remain largely unexplored.

Accessing the Guide

The SEAQUEST Educational Activities Guide is currently available in English. Greek, Dutch, Portuguese, and Danish translations will soon be available, ensuring educators across Europe can access these resources in their national languages.

Together, the Curriculum for Teachers and the Educational Activities Guide provide a complete toolkit enabling educators to bring seagrass literacy into their classrooms through both knowledge and hands-on activities.

Access the SEAQUEST Educational Activities Guide here.
